WHO WE ARE

A consultancy built for consequence

We started FortressPoint to close a real gap in enterprise security. Organisations in the UK, Nigeria, and across West Africa need real security capability, not compliance theatre. We build programmes that match actual risk, fit how a business really operates, and last well after our engagement ends.

Our founders bring experience from enterprise security, critical national infrastructure, and executive advisory work across both markets. Today FortressPoint serves micro to large enterprises across the UK and Nigeria. We judge our work by how much exposure we remove and how much confidence a board has in its security programme, not by the certificates on a wall.

WHAT DRIVES US

Integrity before optics

We give you an honest read on your security posture, even when the findings are uncomfortable. We will not soften a finding just to keep a client happy.

Substance over theatre

We tie every recommendation to a risk outcome, and we build every deliverable to be useful in practice, not just to pad a report.

Accountability by design

We build clear ownership of risk, defined escalation paths, and governance frameworks that survive personnel changes and outlast the engagement.

WHERE WE OPERATE

Dual-market presence

FortressPoint is registered and operating in both the United Kingdom and Nigeria. We bring the same standard of security consultancy to Lagos and London, with practitioners who understand how both markets actually work.

United Kingdom

MICRO TO LARGE ENTERPRISES

Our UK practice serves micro to large enterprises. We align every engagement with UK GDPR, Cyber Essentials Plus, ISO 27001, and NCSC guidance, and we deliver board-level reporting, technical assurance, and certification support.

UK GDPR | ISO 27001 | Cyber Essentials | NCSC Aligned

15 Grange Road, Shepshed, Loughborough, Leicestershire, England, United Kingdom

Nigeria

MICRO TO LARGE ENTERPRISES

Our Nigeria practice supports micro to large enterprises as they work through the NDPA 2023, the CBN cybersecurity framework, and NCC directives. We bring the operational rigour of established UK practice to one of West Africa's most complex digital markets.

NDPA 2023 | CBN Framework | NCC Guidelines | ISO 27001

OUR CULTURE

Excellence

The highest professional standards in every engagement, every deliverable, every interaction.

Integrity

We tell clients what they need to hear, not what they want to hear. Honest advice builds lasting relationships.

Ambition

We are building a consultancy that matters to our clients, our people, and both markets we serve.

Inclusion

Diverse teams build better security programmes. Every voice and perspective strengthens our work.

WHAT WE DELIVER

Our ten integrated service lines

01

Cybersecurity Strategy & Architecture

Most organisations build security programmes by accumulating tools instead of designing a coherent architecture. We build strategies aligned to NIST CSF 2.0 and the Zero Trust principles in NIST SP 800-207, starting with threat modelling specific to your sector and geography across the UK and Nigeria.

- Security operating model design
- Threat modelling and risk registers
- Security architecture review and design
- Zero Trust architecture (NIST SP 800-207)
- Zscaler ZIA/ZPA design & implementation
- Technology roadmap development
- Board-level security reporting

02

Governance, Risk & Compliance

Passing an audit and managing risk are not the same thing. We build GRC frameworks that start with your actual risks, not a generic template, covering UK GDPR, NDPA 2023, CBN cybersecurity frameworks, and ISO 27001 in a single engagement.

- ISO 27001 implementation & audit readiness
- UK GDPR and NDPA 2023 compliance programmes
- Data governance framework design
- CBN / NCC / NITDA advisory
- Third-party & supply chain risk management
- Policy framework development

03

ISO 27001 Implementation

Most ISO 27001 projects produce documentation that satisfies the auditor but does not reflect how the organisation works. We build the ISMS the other way around, starting with a gap assessment against all 93 Annex A controls and your actual operating environment.

- ISO 27001:2022 gap assessment & remediation planning
- ISMS design and documentation (policies, risk register, SoA)
- Internal audit against ISO 27001:2022 requirements
- Certification audit preparation & coordination
- Management review facilitation
- CBN and NDPA 2023 control mapping for Nigerian clients

04

NDPA 2023 Compliance

The Nigeria Data Protection Commission can investigate, audit, and fine organisations up to 2% of annual gross revenue. We build NDPA 2023 compliance programmes that align to the GAID 2025 directive, covering data mapping, lawful basis, privacy notices, DPIA, and NDPC registration.

- Personal data inventory and mapping
- Lawful basis assessment & documentation
- Privacy notice and policy development
- Data Protection Impact Assessment (DPIA) support
- Breach notification procedure aligned to NDPA 2023 & GAID 2025
- NDPC registration support

05

Cloud, Azure & Identity Security

Default Microsoft 365 and Azure configurations leave a lot of attack surface exposed. We design and implement Azure security architecture covering Entra ID hardening, Conditional Access policy design, Privileged Identity Management, Defender for Endpoint, Intune BYOD, and Microsoft Sentinel SIEM.

- Azure security architecture & hardening
- Entra ID (Azure AD) architecture & hardening
- Conditional Access policy design & implementation
- Privileged Identity Management (PIM) configuration
- Microsoft Intune BYOD deployment
- Microsoft Defender for Endpoint configuration
- Microsoft Sentinel SIEM and SOAR
- Identity governance & access reviews
- Single Sign-On (SSO) & MFA deployment

06

Data Security & Information Protection

Most organisations protect data at the network edge and stop there. Once a file moves into email, a cloud app, or a personal device, it is effectively unprotected. We build Microsoft Purview programmes that classify, label, and control data wherever it moves, covering data loss prevention, insider risk management, and security posture management in a single practice.

- Microsoft Purview Information Protection deployment & configuration
- Data classification and sensitivity labelling
- Data Loss Prevention (DLP) policy design & implementation
- Insider Risk Management programme design
- Data Security Posture Management (DSPM) for Microsoft 365 and Azure

07

Vulnerability & Exposure Management

Running vulnerability scans and managing vulnerabilities are different activities. We design Continuous Threat Exposure Management programmes using Tenable, building risk-based prioritisation models that tell your team which findings to fix first based on exploitability and business impact, not CVSS scores alone.

- Vulnerability scanning & assessment (Tenable.io, Nessus)
- Continuous Threat Exposure Management (CTEM)
- Risk-based prioritisation & remediation planning
- Attack surface management
- Patch management governance & oversight
- Executive vulnerability reporting & metrics

08

AI Governance

The EU AI Act entered into force in August 2024 and applies to UK and Nigerian organisations with EU operations or customers. We build AI governance programmes aligned to the EU AI Act risk tiers and NIST AI RMF, starting with an AI inventory and classification of every system in scope.

- AI risk assessment & classification (EU AI Act)
- AI governance policy & framework development
- NIST AI Risk Management Framework implementation
- AI model transparency, explainability & bias controls
- AI vendor & third-party risk management
- Board and executive AI governance advisory

09

vCISO & Advisory Services

A full-time CISO costs over £150,000 per year. Most mid-market organisations need board-level security leadership at the right moments, not daily. We provide fractional CISO engagements structured around fixed days per month, covering security committees, board reporting, regulatory liaison, and incident response leadership.

- Fractional CISO engagement
- Security committee & board representation
- Incident response leadership
- Security investment planning & prioritisation
- Regulatory liaison & audit management
- Security programme oversight & accountability

10

Security Awareness & Training

Business email compromise, phishing, and social engineering succeed because people make decisions without the information they need. We design security awareness programmes around your actual threat profile, using phishing simulations with sector-relevant templates and role-based training targeted at the functions that carry the most risk.

- Executive & board security briefings
- Company-wide security awareness campaigns
- Phishing simulation programmes
- Role-based technical training
- Security culture measurement & reporting

HOW WE WORK

Our delivery approach

01

Discover & Assess

Initial risk assessment, stakeholder workshops, and threat-landscape analysis to establish your current security posture.

02

Design & Plan

Security architecture design, control selection, and a prioritised implementation roadmap tailored to your risk profile.

03

Deliver & Implement

Technical deployment, policy creation, team enablement, and change management, delivered to timeline and budget.

04

Assure & Improve

Continuous testing, metrics review, lessons-learned cycles, and programme optimisation to maintain effectiveness.

WHY FORTRESSPOINT

What sets us apart

01

Dual-market expertise

We know UK regulatory frameworks (UK GDPR, NCSC guidance) and Nigerian requirements (NDPA 2023, CBN, NCC mandates) in depth, and we are formally registered in both the UK and Nigeria.

02

Full-spectrum service coverage

Ten integrated service lines, from cybersecurity strategy and GRC through to cloud, identity, data protection, and AI governance, all delivered by certified specialists.

03

Microsoft ecosystem depth

Hands-on expertise across Azure, Intune, Defender, Microsoft Sentinel, Entra ID, and Purview, the stack most enterprise organisations already depend on.

04

Business-aligned delivery

We design security controls to fit your operational reality: pragmatic, right-sized, and built for your team to run long after our engagement ends.

05

Transparent governance

Every deliverable comes with full traceability and audit-ready documentation, so you can demonstrate compliance and programme maturity at any time.

FortressPoint
Strong foundations. Clear governance. Confident security.

GET IN TOUCH

Let’s start a conversation.

Whether you have a specific security challenge, need a capability briefing, or want to discuss a potential engagement, we are ready to talk. No obligation, no sales pressure.

> *“Security is not a product you buy. It is a posture you build, methodically, deliberately, and with full understanding of what you are protecting and why.”*
